SUMMARY

Business intelligence and data analyst who builds reporting marts, ELT pipelines, and dashboards with SQL, Python, dbt, PostgreSQL, Power BI, and Tableau. Built an AI citation-to-traffic attribution model across 40+ client accounts, automated AWS pipelines with a 95%+ morning freshness SLA, and cut data-cleaning time 40% across six years of records.

TECHNICAL SKILLS

- **Languages:** SQL, Python, R
- **Warehouses & Databases:** PostgreSQL, Snowflake, Databricks, BigQuery
- **Data Engineering:** dbt, ELT pipelines, AWS, data freshness and volume checks, multi-tenant data modeling
- **BI & Reporting:** Power BI, Tableau, Looker Studio, Excel, GA4, Google Search Console
- **Analytics:** Attribution modeling, KPI framework design, dashboard automation, statistical testing, forecasting
- **Business:** Stakeholder management, requirement elicitation, data storytelling for non-technical audiences

PROFESSIONAL EXPERIENCE

MaximusLabs AI, Remote
Business Intelligence Engineer, Part-Time January 2025 - Present

- Built dbt and PostgreSQL reporting marts across 26+ client properties, normalizing URLs and 5 AI search channels to join GA4, Search Console, and citation data into 16 months of historical trend analysis.
- Created an AI citation-to-traffic attribution model linking ChatGPT, Perplexity, and Gemini mentions to organic and referral conversions, standardizing KPIs across 40+ accounts and cutting onboarding to under 1 day.
- Automated daily Python and SQL ELT pipelines on AWS with 14-day rolling volume checks and UI parity audits, reaching a 95%+ morning freshness SLA and 100% multi-tenant data isolation across client dashboards.

YourPassion1st, Remote
Data Analyst, Volunteer April 2026 - Present

- Built an automated survey pipeline in Google Sheets Apps Script that processes Typeform responses across program years without manual cleanup, using keyword mapping to absorb changing survey wording.
- Structured the output into canonical and dashboard layers feeding Looker Studio, so reporting refreshes as responses arrive, and support Salesforce dashboarding for program reporting.

Life Science Cares, Boston, MA
Data Analyst Intern June 2025 - August 2025

- Built one longitudinal dataset from six years of fragmented records across five cities, defining a consistent schema and standardizing fields with AI-assisted cleanup that cut manual cleaning time 40%.
- Translated leadership requirements into a KPI framework with a North Star metric plus input, process, output, and outcome metrics, and a collection template every future cohort uses.
- Built Power BI dashboards on an automated refresh for the board and partner companies, and benchmarked results against peer programs for context the internal data couldn't provide.

FourBlock, New York, NY
Data Analyst Intern January 2025 - April 2025

- Built a Python sentiment analysis pipeline that scored 1,200+ open-ended survey responses, replacing about a week of manual reading and surfacing the program areas participants felt needed improvement.
- Extracted 5+ years of Salesforce data with SQL across 1,000+ participants, evaluating before-and-after skill gains and in-person versus virtual delivery to find format-driven outcome differences.

PROJECTS

Weather-Driven Revenue Forecasting | Ledge Brewing Co, Intervale, NH Spring 2025

- Built a Random Forest model on 3 years of point-of-sale and daily weather data (pulled via API) with SQL and Python, finding a normal weekend adds about $2.4K over a weekday and live music another $1.6K.
- Found that Boston weather, not local weather, predicted demand because many customers travel in from Boston, raising the model's R-squared from 0.70 to 0.88 for staffing plans.

EDUCATION

Northeastern University, Boston, MA Dec 2025
Master of Science in Business Analytics, D'Amore-McKim | CGPA: 3.7/4

SRM University, Chennai, India May 2022
B.Tech, Electronics and Communication Engineering | CGPA: 7.76/10
